APPROVED
USED TRUCKS
Close to your business
BUY PEACE OF MIND

Linde Approved Used Trucks are a high-quality solution for your individual requirements and application needs in material handling.

The reasons for buying an Approved Truck are as wide-ranging as our customer’s businesses. It can be a fast-growing young company, not yet able to justify the investment in new equipment. It can be a mature business with varying operating times for niche tasks or just one wanting to bolster an already large fleet by a mix of new equipment and used trucks. For all these cases, and many more, Linde’s Approved Trucks offer a risk-free way to acquire the same features as Linde SUPER together with the same quality. Our international Linde Approved Standard ensures that you can always rely on the same high quality and performance requirements wherever you buy an Approved Truck from us.

OUR REMANUFACTURING PROCESS

At Linde, approved equipment is re-manufactured according to our internationally standardized remanufacturing process. Specially trained Linde technicians diligently work through the process in specialized regional remanufacturing centers. Only once a forklift has successfully passed through the entire process it receives the ‘Approved Truck’ seal of quality. Our international Linde Approved Standard ensures that you can always rely on the same high quality and performance requirements wherever you buy an Approved Truck from us.

First check on arrival
In a first step, qualified engineers perform visual and functional checks on all truck systems and components, including lift mechanisms and engines. All functions are tested to identify parts that need further inspection.

Pre-delivery check
The last step involves a comprehensive final inspection. Signed Approved and safety certificates are provided with every truck as certification. Only after having successfully passed the final inspection, the truck receives the ‘Approved by Linde’ seal of quality. It marks the remanufacturing as completed by Linde and visibly distinguishes an Approved Truck from other used offerings in the market.

Comprehensive inspection
At this stage, the technician assesses if the truck is fit to join the Approved Trucks program. If so, all mechanical, electrical and in particular all safety parts, are thoroughly checked to identify components which need to be replaced by genuine Linde spare parts. In addition the battery and combustion engine are comprehensively tested and will also be fully replaced if the test fails.

Remanufacturing process
The machines are remanufactured according to our international Linde Approved standards. Depending on the selected Approved Level they are completely painted and remanufactured. This standardized process guarantees the same high product quality wherever you buy an Approved Truck from Linde.

Fleet Returns
Linde approved trucks are typically returned from our Linde owned rental fleets, transformed from new by Linde engineers.

LINDRA PLUS
The Linde PLUS standard includes the following refurbishment measures and equipment features:

---

Emissions test and compression pressure measurement for IC trucks
Battery capacity of more than 70 percent
Steering axle checked in accordance with the manufacturer’s specifications
Trailer tires with more than 60 percent tread depth
Hydraulic unit and combi-axle checked in accordance with the manufacturer’s recommendations
Re-painting in original Linde colors and Linde labels
Well-maintained driver’s seat and safety belt
Prongs and lift chains with wear limit at 40 percent
Transparent truck history
Complete transfer certificate

Warranty: 3 months/250 hours (certificate included)
